SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a new collection of information.

The Northwest Fisheries Science Center and Southwest Fisheries Science Center are undertaking an economics research project to assess the preferences of recreational steelhead anglers for trip attributes including opportunities for catching wild and hatchery steelhead. The Economic Survey of Recreational Steelhead Fishermen (ESRSF) will yield information on angling preferences that will inform management of recreational steelhead resources and steelhead hatchery operations in The Pacific Northwest. More specifically, the ESRSF will collect data needed to 1) assess the socioeconomic characteristics of recreational anglers; 2) assess the economic value of steelhead recreational fishing trips through statistical estimation of models; and 3) assess the change in these values associated with possible changes in recreational steelhead angling opportunities, including catch rates of wild and hatchery fish, site attributes, and travel costs.

II. Method of Collection

A sample of Washington State fishing license holders who intended to fish for steelhead will be screened with a email survey (screener), followed by an internet survey. Sampled anglers

who do not have an email address in the license database used for sampling will be sent an invitation by mail to the web-based screener and subsequent survey. Respondents to the internet survey will submit data online.
